Broken Hill Public Art Condition Survey and Conservation Plan

Prepared for: Broken Hill City Council
Submission Date: February 2023

ACKNOWLEDGEMENT

We acknowledge the Elders, and descendants of the people who have been and are the Custodians of these lands. We acknowledge that the land on which we work and live was the place of age-old ceremonies, of celebration, initiation, and renewal, and that the local Aboriginal peoples have had and continue to have a unique role in the life of these lands.

TABLE OF CONTENTS

SCHEDULE 1 – EXECUTIVE SUMMARY

This report presents the results of a condition survey assessing the works held within Broken Hill City Council's public art collection. A total of 56 works were condition assessed.

Over a period of one week, conservators from Grimwade Conservation Services examined each artwork at ground level and in situ, rating their condition on a scale from 1 to 5, where category 1 is 'good', and category 5 is 'extreme'. The majority of the works assessed (37) are in 'fair' condition (category 2), with the remaining works falling into category 1-good (7 works), category 3-poor (9 works) and category 4-very poor (3 works). None of the works surveyed were classified as category 5-extreme.

Following condition rating, conservation treatment and maintenance recommendations are made for each work and can be found in the individual reports. Of the sample surveyed, 39 sculptural works require remedial conservation treatment, for which proposals and advised costings are provided. Urgency for treatment varies. To assist with prioritisation of the recommended conservation treatments, works were assigned a treatment priority ranking and compiled accordingly. This will assist council to plan for and undertake any necessary or recommended conservation treatment works according to urgency. The works exhibiting the poorest conditions are ranked highest.

Sculptural works of the highest urgency for treatment listed below:

- *Wooden Canoe*, De Main, Geoff
- *Cerrusite Crystal*, Broken Hill Technical College
- Untitled (Humanoid Forms), Vodic, Len

Prominent works rated category 3-poor, but also requiring urgent treatment include:

- *Sully's Carpark Totems*, numerous artists
- *The Last Drop*, TAFE Western

SCHEDULE 2 – PROJECT OVERVIEW

2.1. Project Information

Broken Hill City council engaged Grimwade Conservation Services (GCS) to complete a survey assessing the condition of the artworks held in council's Public Art collection (sculpture, memorials, functional objects, archaeological, living heritage and murals) and make recommendations for conservation treatment and general maintenance of the works. The scope of this 2022 survey includes a total of 56 works, comprising 38 sculptures, 11 memorials, 2 functional objects, 1 archaeological site, 1 living history site and 3 murals.

Works were assessed in situ over one work in and around the Broken Hill area. Each artwork was examined at ground level in situ, then placed into one of 5 condition categories, scaled from 'good' (category 1) to 'extreme' (category 5). This rating is noted in the tables attached at Appendix II and in the individual condition reports generated for each artwork following examination (Appendix III).

Conservation treatment and maintenance recommendations are made for each work and can be found in the individual reports. Of the sample surveyed, 39 works (24 sculptural works, 11 memorials, 1 functional object, and 3 murals) require remedial conservation treatment, for which proposals and advised costings are provided in the individual condition reports. Urgency for treatment varies. To assist with prioritisation of the recommended conservation treatments, works have been assigned a treatment priority ranking and compiled accordingly. This allows for council to plan for and undertake any necessary or recommended conservation treatment works according to urgency. The works exhibiting the poorest conditions are ranked highest, however object significance and value may also influence Council's approach to prioritising conservation works.

Individual condition reports have been generated for each of the surveyed works and are attached in alphabetical order of title to this report. Individual files containing these condition reports and associated photographs will also be provided to Broken Hill City Council.

2.2. Project Team

This report was prepared by Grimwade Centre principal conservator Evan Tindal. Site inspection and assessments were undertaken by Evan Tindal and Ellie Urrutia Bernard in November 2022.

SCHEDULE 3 – METHODOLOGY

The assessment process commenced with a site inspection of each artwork (56 works total) to collect data regarding condition. Examination occurred at ground level in situ and included photography. In conjunction with the site inspection, other site-related information was reviewed, including Council's KE Emu records and in-person/ email conversations with Council employees regarding works not listed in KE Emu. Relevant information from this documentation package was extracted and noted in the new condition reports if and as necessary.

3.1. Condition Rating

Data collected during the site inspections regarding condition allowed each artwork to be rated against set criteria, permitting a direct comparison between all works and for future condition assessment. The works are placed in one of 5 condition categories, detailed below:

CONDITION RATING	DEFINTION USED IN THIS ASSESSMENT
1	Artefact is in **good** condition, requiring no or very minor conservation treatment (beyond ongoing maintenance).
2	Artefact is in **fair** condition, requiring moderate treatment (on or off site).
3	Artefact is in **poor** condition, requiring moderate to major treatment (on or off site).
4	Artefact is in **very poor** condition, but still able to be stabilised or maintained.
5	Artefact is in a condition **beyond remediation,** such that it cannot be stabilised and may need deaccessioning.

Rating condition against this scale allows for standardised comparison of the works with one another; and will allow for standardised comparison against the current condition of the individual work in future assessments.

3.2. Conservation Recommendations and Treatment Priority

Informed by the condition assessment and risk score, conservation treatment and maintenance recommendations are made for each work. These can be found in the individual reports, along with indicative costing at GCS rates. Note that the costings are subject to variation (up to 20%) and do not include allowance for all incidentals, such as equipment hire or traffic control. These should be taken as a guide and council should contact GCS for an official quote for individual treatments prior to budgeting for works.

Urgency of treatment varies based on the nature and extent of degradation. As a general rule, there is higher priority to treat an artwork exhibiting structural instability than one exhibiting surface issues affecting visual interpretation of the work[1]

In order to systematically represent the variation in urgency and produce a schedule of works by treatment priority, each artwork was assigned a score from 1-5 for three categories of condition issues:

- **Structural:** Issues currently affecting the structural integrity and stability of the artwork. Also includes immediate WHS issues. Mechanisms that could progress to structural issues unchecked are considered low-level structural issues.
- **Stability**: Issues affecting the long-term stability of the artwork through ongoing deterioration by current mechanisms, may have an aesthetic and surface impact but not a structural impact.
- **Aesthetic:** Issues affecting the appearance of the artwork or causing the work to display not as originally intended. These issues do not affect the long-term stability or structural integrity of the artwork.

Each work is then placed at the priority level corresponding with the highest individual issue rating. The individual issue scores provide hierarchical structure within each priority level. Structural issues take priority over stability issues, which then take priority over aesthetic issues.

It should be reiterated that the treatment priority rating is based solely on an assessment of the material issues and risks this presents to the stability of the work and the safety of the public. In determining the management plan for these artworks and the priority of works to be undertaken significance and other politically relevant issues should also be considered.

3.3. Results of the Assessment

Condition

As assessed against the criteria described above in Section 3.2., the collection (per the majority sample group of 32 works) is in overall fair condition, presenting as well-maintained given the conditions of the outdoor display environment. A list of the condition ratings is included within this section in Table 1 (p. 11), below.

CONDITION RATING	NO. OF ARTWORKS	DESCRIPTION
1	7	**7** works were assigned a condition rating of 1, indicating that they are in **good** condition and presenting signs of wear or aesthetic disruption within acceptable levels given the outdoor display environment. They require only continued general maintenance and monitoring.
2	37	The majority of works surveyed (**37**) were assigned a condition rating of 2, indicating **fair** condition and requiring only minor treatment works or general maintenance. Of these, moderate aesthetic issues and non-ongoing damage related to mechanical or chemical degradation informed the condition rating of the works.
3	9	**9** works were assigned a condition rating of 3, presenting in **poor** condition. The majority of these works presented combinations of contaminants causing a high level of aesthetic disruption and indications of moderate instability or structural damage.
4	3	3 works were classified as being in **very poor** condition, with a condition rating of 4. There are signs of structural damage and ongoing degradation across all these works, the degree of which has not advanced so far that the works can no longer be stabilised or restored. Additionally, these 4 works present with moderate to severe aesthetic issues relating to structural or surface degradation and/or relating to high levels of environmental contamination.
5	0	No works presented signs degradation to the extent that **deaccession is recommended**. These are considered **beyond repair** and fabricated with materials unsuitable for the current outdoor environment. However in several severe cases Council may determine the significance of the object does not warrant conservation costs.

3.4. Treatment Priority

The works have been ranked according to treatment priority. This order, tabulated in Table 1, Appendix II, is approximate, given the quantity of works assessed and the similar issues present across these. It should be used as a general indication to assist Broken Hill City Council in the assignment of works and distribution of budget.

3.5. Recommendations

- Prioritise treatment of artworks per the priority schedule provided at Appendix II. As noted, this schedule is based on the structural, chemical, and visual condition of the works. Council may factor in other aspects such as significance and monetary value when making decisions about prioritisation.

- Ensure all works are regularly maintained per the recommended processes for each individual work. In applicable cases, contact the artist as a starting point for repairs to works.

- Ensure all works exempt from this round of assessment are examined within the next 12 months.

- Conduct a condition audit every 5 years following the methodology used in this assessment

APPENDICES

APPENDIX I: ASSESSMENT CRITERIA

Condition

A condition rating was applied to each artwork. This rating is outlined in the table below and the condition rating is recorded in the individual artwork reports.

CONDITION RATING	DEFINTION USED IN THIS ASSESSMENT
1	Artefact is in **good** condition, requiring no or very minor conservation treatment (beyond ongoing maintenance).
2	Artefact is in **fair** condition, requiring moderate treatment (on or off site).
3	Artefact is in **poor** condition, requiring moderate to major treatment (on or off site).
4	Artefact is in **very poor** condition, but still able to be stabilised or maintained.
5	Artefact is in a condition **beyond remediation,** such that it cannot be stabilised and may need deaccessioning.

Treatment Priority Classification

The criteria used to assign scores to each of the condition issue categories (structural, stability, aesthetic) are as follows:

TREATMENT PRIORITY		STRUCTURAL ISSUES	STABILITY ISSUES	AESTHETIC ISSUES
5	HIGH	URGENT. Current and ongoing deterioration. Risk to public safety	URGENT. Current and ongoing deterioration. Artwork at risk	URGENT. Artwork no longer displays as intended.
4	MEDIUM - HIGH	Current and ongoing issues. Could become a risk to public safety	Current and ongoing issues. Could put artwork at risk	Damage has serious impact on interpretation or artwork
3	MEDIUM	Moderate structural damage or issues	Moderate deterioration or stability issues	Aesthetic issues, to moderate extent
2	LOW-MEDIUM	Minor to Moderate impact/seriousness	Minor to Moderate impact/seriousness	Minor to moderate impact
1	LOW	Structurally sound	Stable (or minor) issues	No (or minor) aesthetic issues

APPENDIX II: TREATMENT PRIORITY CLASSIFICATION

Table 1: Treatment Priority Classification

Title	Artist	Year	Asset No	Work Category	Condition Category	Treatment Priority Rating	Remedial Treatment	Indicative Treatment Cost
Wooden Canoe	De Main, Geoff			Sculpture	4. Very Poor	3. High	Yes	$15,000
Cerrusite Crystal	Broken Hill Technical College	1988	1988.001	Sculpture	4. Very Poor	3. High	Yes	$10,000-$15,000
The Ant	Hart, Kevin Charles (Pro)	1980	1990.0044	Sculpture	3. Poor	3. High	Yes	$15,000
The Workers	Hart, Kevin Charles (Pro)	1995	1995.0105	Sculpture	2. Fair	3. High	Yes	$20,000
Untitled (Humanoid Forms)	Vodic, Len	1994	1994.0044	Sculpture	4. Very Poor	3. High	Yes	$10,000-$15,000
Sully's Carpark Totems	Biasio, Frank; McEvoy, Allen; Edge, Gary; Edge, Richard; McEvoy, Charmain; Etrich, Sonia; Newchurch, Jeffrey; Etrich, Betty; Squire, Clint; Stewart, Neil; Williams, Dennis	2003	2003.0029	Sculpture	3. Poor	3. High	Yes	$25,000
The Last Drop	TAFE Western			Sculpture	3. Poor	3. High	Yes	$10,000
Untitled (Human Form)	Vodic, Len			Sculpture	3. Poor	3. High	Yes	$5,000
Story Poles	Demain, Geoff; Bates, Darren; Bates, Debra; Biasio, Frank; Biasio, Tegan; Edge, Gary; Etrich, Betty; Etrich, Sonia; Martin, Richard; McEvoy, Alan; McEvoy, Charmain	2003	2003.0029	Sculpture	3. Poor	3. High	Yes	$25,000
Two Miners with Dog	Vodic, Len			Sculpture	3. Poor	3. High	Yes	$10,000

Title	Artist	Year	Asset No	Work Category	Condition Category	Treatment Priority Rating	Remedial Treatment	Indicative Treatment Cost
The Bomber	Gilbert, Charles Marsh Web	1924	1925.0001	Memorial	2. Fair	2. Medium	Yes	$20,000
The Jamison's Shaft	Lyle, Max	1979	1979.0008	Sculpture	2. Fair	2. Medium	No	
David James	De Main, Geoff	2008	2008.0004	Memorial	2. Fair	2. Medium	Yes	$2,000
James Poole	De Main, Geoff	2008	2008.0005	Memorial	2. Fair	2. Medium	Yes	$2,000

APPENDIX III: CONDITION ASSESSMENT REPORTS

Title	*Angles of the Sun and Moon*
Artist/ maker	Jikiya, Valerian
Year	1993
Asset No.	1994.0019
Location	Address: Living Desert State Park Lat. -31.899288 Long. 141.449975
Asset type	*Sculpture*
Dimensions	
Components	
Materials	Sandstone (Wilcannia region), concrete/cement, iron
Manufacture	Carved sandstone and iron component mounted with cement/concrete

Previous repairs/ modifications? [ ] YES [X] NO

Notes: One of twelve sandstone sculptures carved during the 1993 Sculpture Symposium organised by sculptor Lawrence Beck Gundabuka with financial support from Broken Hill City Council and an Australia Council grants program.

Date of Examination: 7 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

[ ] 1. GOOD [X] 2. FAIR [ ] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

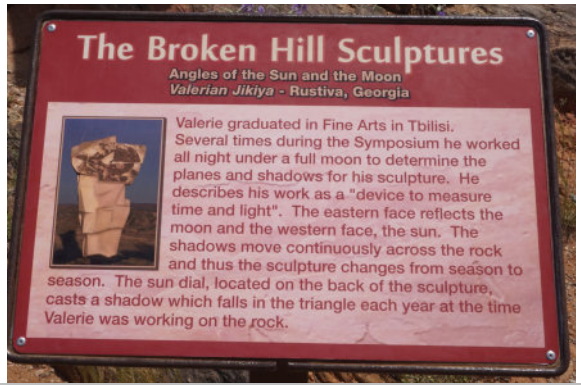
PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component	✓	Several areas of loss are evident adjacent to cracks (figs. 9-12).
Corrosion	✓	Stable corrosion product visible on protruding armature (fig. 7).
Cracks/ splitting	✓	Several cracks and splitting at corner visible (figs. 9-13). Elements at the corners are at risk of separating from the work.
Disjoin/ Loose component		
Distortion		
Pest damage		
Previous treatment/ repair		
Rotting		
Wear/ polishing		

OTHER	

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents	✓	Minor abrasions and possible surface losses (figs. 5-6, 14).
Accretion		
Areas of loss		
Corrosion		
Cracks		
Delamination		
Dust/ dirt	✓	Minor dust and dirt visible, inherent to outdoor sculpture.
Fading		
Flaking/Friable		
Mould/ mould damage		
Pest damage		
Pitting		
Previous treatment		
Staining/ discolouration		
OTHER		

INTERPRETIVE/ ATTRIBUTION PLAQUE?	**YES**	NO

2 x plaques. Bronze plaque mounted into cement block and standing steel plaque.



TREATMENT PRIORITY

☒ LOW ☐ MEDIUM ☐ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	YES	NO

Recommended Remedial Treatment Works	Advised Cost
• Consolidate cracks at corners to prevent separation from the work. • Fill losses and cracks.	~$2,000

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate and avian guano. • Monitor iron corrosion and resultant spalling to stone. • Monitor stone delamination. • Monitor possible stone delamination. • Monitor possible soil erosion.	Biennially 1 year 2 years 2 years 2 years

Title	*Australia Day 1997*
Artist/ maker	Steer, Howard William Hart, Kym DeMain, Geoff Gehlert, Shane
Year	1997
Asset No.	
Location	Address: Broken Hill Airport Lat. -31. 99526, Long. 141. 47008
Asset type	*Mural*
Dimensions	
Components	3 Walls: 17 pieces
Materials	Plaster (render), Paint
Manufacture	Painted

Previous repairs/ modifications? [ ] YES [X] NO

Note: Wall painting mural jointly created by the Arid Zone Artists group: Howard William Steer, Kym Hart, Geoff DeMain and Shane Gehlert.

The mural consists of 17 individual works; most works are titled by the contributing artist. The details for each are recorded below.

- 01: Steer, Howard William. 1997, *Pub Crawl*
- 02: Hart, Kym. 1997, *Hart of the Outback* (2 parts)
- 03: De Main, Geoff. 1997, *Tibooburra Boulders* (2 parts)
- 04: Steer, Howard William. 1997, *Clocking on clocking off* (4 parts)
- 05: Gehlert, Shane. 1997, *Robo Roo* (9 parts)
- 06: De Main, Geoff. 1997, *Your Go* (visual description: hand punching through wall, cards, sepia colonial portrait, aboriginal child, industrial council 1997) (2 parts)
- 07: Hart, Kym. 1997, *Well, Southern Cross Windmill & Pipes* (3 parts)
- 08: Gehlert, Shane. 1997, *Crittenden Flying Postie*
- 09: Hart, Kym. 1997, *Landscape with houses, path and tree's* (2 parts)
- 10: Gehlert, Shane. 1997, *Broken hill residential houses*
- 11: Gehlert, Shane. 1997, *Barramundi*
- 12: Hart, Kym. 1997, *Lake with ripple and tree's*
- 13: Steer, Howard William. 1997, *Flying Doctor and Second Opinion*
- 14: Gehlert, Shane. 1997, *Robo Roo blue* (4 parts)
- 15: De Main, Geoff. 1997, *Miners Cottages* (2 parts)
- 16: Steer, Howard William. 1997, *Dressmaker on the Run*
- 17: Steer, Howard William. 1997, *Captain Sturts first desert pea*

Date of Examination: 7 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

☐ 1. GOOD ☒ 2. FAIR ☐ 3. POOR ☐ 4. VERY POOR ☐ 5. EXTREME

PRIMARY STRUCTURE	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component		
Corrosion

Title	*Bajo El Sol Jaguar* (Under the Jaguar Sun)
Artist/ maker	Tirado, Antonio Nava
Year	1993
Asset No.	1994.0021
Location	Address: Living Desert State Park Lat. -31.899288 Long. 141.449975
Asset type	*Sculpture*
Dimensions	
Components	
Materials	Sandstone (Wilcannia region), concrete/cement
Manufacture	Carved sandstone mounted with cement/concrete

Previous repairs/ modifications? [X] YES [ ] NO

Notes: One of twelve sandstone sculptures carved during the 1993 Sculpture Symposium organised by sculptor Lawrence Beck Gundabuka with financial support from Broken Hill City Council and an Australia Council grants program.

Date of Examination: 7 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

[ ] 1. GOOD [X] 2. FAIR [ ] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

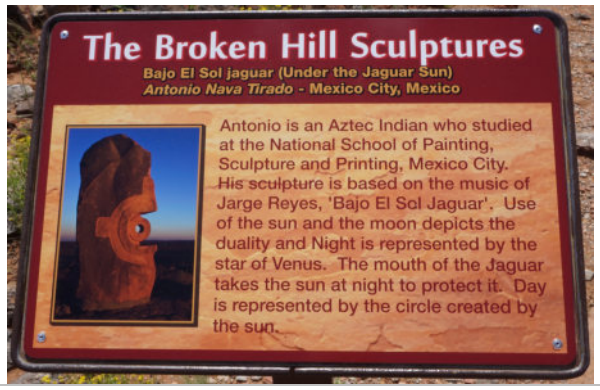
PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component		
Corrosion		
Cracks/ splitting	✓	Multiple cracks with minor splitting visible. Major cracks and losses appear to have been previous repairs (figs. 5-20).
Disjoin/ Loose component		
Distortion		
Pest damage		
Previous treatment/ repair	✓	Multiple areas of previous repairs are present. These are concentrated around the loop component and at corners. Repair materials includes an adhesive, colour-matched filler (possibly lime mortar) and concrete (figs. 5-20).
Rotting		

Wear/ polishing	✓	Surface wear is evident within the circular element, likely stemming from human interaction (fig. 25).
OTHER		

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents		
Accretion		
Areas of loss	✓	Small areas of loss are evident throughout, particularly around previous repairs.
Corrosion		
Cracks	✓	Minor surface cracks visible throughout.
Delamination	✓	Stone delamination evident along several edges (fig. 20).
Dust/ dirt	✓	Minor dust and dirt visible, inherent to outdoor sculpture.
Fading		
Flaking/Friable		
Mould/ mould damage		
Pest damage	✓	Pest ootheca's (egg sacs) visibly embedded in recesses of sculpture (fig. 23).
Pitting		
Previous treatment		
Staining/ discolouration		
OTHER		

INTERPRETIVE/ ATTRIBUTION PLAQUE?	YES	NO

2 x plaques. Bronze plaque mounted into cement block and standing steel plaque.



TREATMENT PRIORITY

☐ LOW ☒ MEDIUM ☐ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	YES	NO

Recommended Remedial Treatment Works	Advised Cost
• Consolidate cracks. • Fill areas of loss with colour-matched lime mortar.	~$5,000

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate and avian guano. • Monitor condition of material repairs. • Monitor stone delamination. • Monitor possible soil erosion.	Biennially 1 year 2 years 2 years

Title	*Bird*
Artist/ maker	Hart, Kevin Charles (Pro)
Year	1999
Asset No.	2000.24
Location	Address: Broken Hill Airport Lat. -31.998520, Long. 141.469753
Asset type	*Sculpture*
Dimensions	
Components	1
Materials	Steel, Paint
Manufacture	Cut, Welded

Previous repairs/ modifications? [X] YES [ ] NO

Notes: This artwork is one in a series of 10 sculptures designed by Pro Hart and constructed by Broken Hill TAFE.

Date of Examination: 8 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

[ ] 1. GOOD [☒] 2. FAIR [ ] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component		
Corrosion		
Cracks/ splitting		
Disjoin/ Loose component		
Distortion		
Pest damage		
Previous treatment/ repair		
Rotting		
Wear/ polishing		

OTHER	

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents	✓	Minor small abrasions evident throughout.
Accretion		
Areas of loss	✓	Loss and flaking paint observed throughout (figs. 5-8).
Corrosion	✓	Minor areas of surface corrosion where the paint layer is lost or perforated.
Cracks		
Delamination		
Dust/ dirt	✓	Dirt particulate and spider webs were observed throughout, consistent with display outdoors (fig. 7).
Fading	✓	Chalking and fading to the paint following exposure to sunlight and outdoor conditions (fig. 8).
Flaking/Friable	✓	Flaking and peeling paint (fig. 8).
Mould/ mould damage		
Pest damage		
Previous treatment	✓	The sculpture appears to have been repainted at least once (figs. 7-8) due to the slightly different hue between the two paint layers.
Staining/ discolouration		
OTHER		

INTERPRETIVE/ ATTRIBUTION PLAQUE?	**YES**	NO

TREATMENT PRIORITY

☐ LOW ☒ MEDIUM ☐ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	YES	NO

Recommended Remedial Treatment Works	Advised Cost
• Remove or reduce failing and flaking paint. • Stabilise surface corrosion where needed. • Repaint in a paint system rated for use on outdoor metals and colour-matched with the original.	~$2,500

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate and accumulation of biomatter from adjacent trees.	1 year

Title	*Cerrusite Crystal*
Artist/ maker	Broken Hill Technical College
Year	1988
Asset No.	1988.0010
Location	Address: Beryl and Bromide St Lat. -31.959337, Long. 141.460411
Asset type	*Sculpture*
Dimensions	
Components	1
Materials	Fibreglass, Stone, Iron Armature, Paint
Manufacture	Fabricated

Previous repairs/ modifications? [ ] YES [X] NO

Notes: This replica of a cerrusite crystal, dedicated to the hard rock miners of Broken Hill, was constructed by the staff and students of Broken Hill Technical College with the assistance of the Broken Hill Community. Bicentennial Project funded by NSW Department of TAFE, 1988.

Date of Examination: 7 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

[ ] 1. GOOD [ ] 2. FAIR [ ] 3. POOR [☒] 4. VERY POOR [ ] 5. EXTREME

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component	✓	Significant paint loss observed throughout (figs. 6-18). At least one of the iron protruding "spikes" is missing (fig. 18).
Corrosion	✓	Iron corrosion product staining evident on the fiberglass and white painted surfaces indicates corrosion to the internal iron armature around which the figure has been sculpted (figs. 6,12-14,16-17).
Cracks/ splitting		
Disjoin/ Loose component	✓	Several stones comprising the plinth have separated from the concrete binder (fig. 5).
Distortion		
Pest damage		
Previous treatment/ repair		
Rotting		
Wear/ polishing		

OTHER	

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents		
Accretion		
Areas of loss		
Corrosion	✓	Surface corrosion staining is evident throughout (figs. 6, 12-14, 16-17).
Cracks		
Delamination		
Dust/ dirt	✓	Dirt particulate, spider webs and biomatter were present throughout.
Fading		
Flaking/Friable	✓	Flaking and degraded surface paint is present throughout (figs. 6-18).
Mould/ mould damage		
Pest damage		
Previous treatment		
Staining/ discolouration		
OTHER	Considerable plant growth was observed within crevices and cracks in the stone plinth (fig. 5,8).	

INTERPRETIVE/ ATTRIBUTION PLAQUE?	**YES**	NO

TREATMENT PRIORITY

☐ LOW ☐ MEDIUM ☒ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	YES	NO

Recommended Remedial Treatment Works	Advised Cost
• Structural engineer to assess stability. • Surface clean to remove flaking and missing paint. • Reintegrate missing iron elements, or "spikes". • Re-mortar separated stone elements to the plinth. • Treat iron corrosion product. • Repaint with an appropriate system rated for outdoor exposure and colour matched to the original. Contact TAFE Western about making repairs in the first instance as the work originated in their facility. Currently the work is displayed in an overgrown area that does not appear heavily-used by the public. Dependent on the structural engineer's assessment and/or significance to the community, Council may consider deaccessioning the work.	~$10,000-$15,000

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate and bird excrement. • Touch up paint as needed. • Keep biomatter and biogrowth in the vicinity curated.	1 year

Title	*Copper Plate Canoe*
Artist/ maker	De Main, Geoff
Year	2005
Asset No.	2005.0009
Location	Address: Sully's Carpark Lat. -31.956250, Long. 141.468618
Asset type	*Sculpture*
Dimensions	
Components	1
Materials	Wood, Copper, Iron
Manufacture	Carved, Hammered, Assembled

Previous repairs/ modifications? [ ] YES [X] NO

Notes: Gift of the artist, 2005

Date of Examination: 7 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

[ ] 1. GOOD [ ] 2. FAIR [X] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents	✓	Numerous dents are evident throughout, however these appear consistent with shaping of the copper substrate during manufacture.
Areas of loss/ detached or missing component	✓	Missing nails located throughout (figs. 28, 31-32, 34); corrosion product that has perforated thin copper plate (figs. 18). This may stem from the collection of water underneath the copper plate.
Corrosion	✓	Copper corrosion resulting in perforation to one plate is evident (fig. 18). Iron nails fixing the copper plates to the wooden substrate also exhibit significant corrosion (figs. 5, 7-15, 28-34). Iron bolts fixing the canoe to the stands exhibit corrosion (figs. 16, 19, 24).
Cracks/ splitting		
Disjoin/ Loose component		
Distortion	✓	Several of the copper plates exhibit minor distortion as the wooden substrate gradually moves (due to the anisotropic nature of wood).
Pest damage		
Previous treatment/ repair		
Rotting	✓	It is possible the wooden substrate exhibits areas of root due to the collection of water under the copper plates.

Wear/ polishing		
OTHER		

SURFACE/ COATING	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Accretion		Small wasp nest observed on the bottom of the canoe (fig. 14).
Areas of loss		
Corrosion	✓	Minor surface corrosion evident throughout, but particularly in internal areas where water can pool (figs. 16, 19-21, 23-24). Bird excrement, which is acidic, has also etched surfaces where it is found (figs. 6-7, 9-10, 15, 25-26).
Cracks		
Delamination		
Dust/ dirt	✓	Dirt particulate, bird excrement and spider webs were observed throughout, consistent with display outdoors. Biomatter is clogging both drains designed to remove water from the interior of the canoe (figs. 19, 21-22, 29-30).
Fading		
Flaking/Friable		
Mould/ mould damage		
Pest damage		
Previous treatment		
Staining/ discolouration	✓	Iron corrosion product staining stemming from corroding nails (figs. 12, 28, 31, 34).
OTHER		

INTERPRETIVE/ ATTRIBUTION PLAQUE?	**YES**	NO

TREATMENT PRIORITY

☐ LOW ☒ MEDIUM ☐ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	YES	NO

Recommended Remedial Treatment Works	Advised Cost
Remedial works should aim to: • Surface clean to remove dirt particulate. • Remove loose surface corrosion product. • Clear clogged drains. • Replace perforated copper plate. • Replace corroding nails, where failing. It is recommended that artist is contacted, if possible, to discuss their interest in restoring the work.	~$5,000-$10,000

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate and bird excrement. • Monitor for evidence of degradation to the wooden substrate.	6 months 1 year

PUBLIC WORKS CONDITION REPORT

Title	*Diviner*
Artist/ maker	Rowlands, Robbie
Year	2020
Asset No.	
Location	Address: Riddiford Arboretum Lat. -31.961595, Long. 141.447536
Asset type	*Sculpture*
Dimensions	
Components	1
Materials	Steel, Galvanised Rolled Steel, Bronze
Manufacture	Cut, Welded

Previous repairs/ modifications? [ ] YES [X] NO

Notes: Repurposed mining rock-bolts, rolled steel, bronze. Commissioned by Broken Hill Council in partnership with Create NSW.

Date of Examination: 9 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

[X] 1. GOOD [ ] 2. FAIR [ ] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component		
Corrosion		
Cracks/ splitting		
Disjoin/ Loose component		
Distortion		
Pest damage		
Previous treatment/ repair		
Rotting		
Wear/ polishing		

OTHER	

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents		
Accretion		
Areas of loss		
Corrosion	✓	Flash rusting/surface corrosion evident throughout, concentrated in areas where the zinc galvanization is missing (figs. 4-14). Iron elements embedded into concrete at the ground are at most risk for increased corrosion (fig. 6-8).
Cracks		
Delamination		
Dust/ dirt	✓	Dirt particulate, bird excrement (figs. 12-13) and spider webs (figs. 5, 14) were observed throughout, consistent with display outdoors. Biomatter has accumulated in areas at the base around the steel mounts (fig. 8).
Fading		
Flaking/Friable		
Mould/ mould damage		
Pest damage		
Previous treatment		
Staining/ discolouration		
OTHER		

INTERPRETIVE/ ATTRIBUTION PLAQUE?	**YES**	NO

TREATMENT PRIORITY

☒ LOW ☐ MEDIUM ☐ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	YES	**NO**

Recommended Remedial Treatment Works	Advised Cost

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate and accumulation of biomatter from adjacent trees. • Keep biomatter cleaned from object base. • Check for increased corrosion at base due to accumulation of biomatter and where iron is mounted into the ground	1 year 1 year 1 year

Title	*Facing the Day and the Night*
Artist/ maker	Luna, Eduardo Nasta
Year	1993
Asset No.	1994.0018
Location	Address: Living Desert State Park Lat. -31.899288 Long. 141.449975
Asset type	*Sculpture*
Dimensions	
Components	
Materials	Sandstone (Wilcannia region), concrete/cement
Manufacture	Carved sandstone mounted with cement/concrete

Previous repairs/ modifications? [ ] YES [X] NO

Notes: One of twelve sandstone sculptures carved during the 1993 Sculpture Symposium organised by sculptor Lawrence Beck with financial support from Broken Hill City Council and an Australia Council grants program.

Date of Examination: 7 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

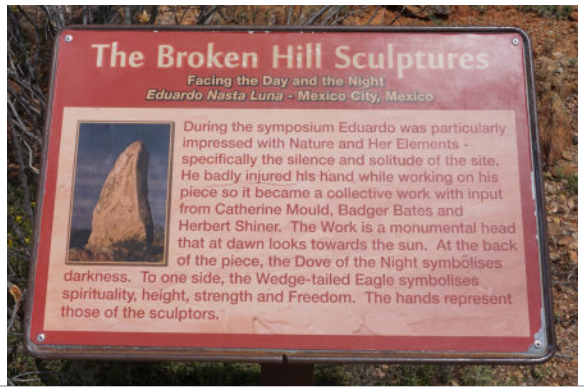
[ ] 1. GOOD [X] 2. FAIR [ ] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component	✓	Possible evidence of sandstone delamination (fig. 7).
Corrosion		
Cracks/ splitting	✓	Several small cracks are visible in concrete mortar at base (fig. 6).
Disjoin/ Loose component	✓	Cement/concrete joining sculpture to rock escarpment appears loose and separated from base, possibly due to soil erosion (figs. 5, 8).
Distortion		
Pest damage		
Previous treatment/ repair		
Rotting		
Wear/ polishing		

OTHER	

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents		
Accretion		
Areas of loss		
Corrosion		
Cracks		
Delamination		
Dust/ dirt	✓	Minor dirt particulate observed throughout.
Fading		
Flaking/Friable		
Mould/ mould damage		
Pest damage		
Previous treatment		
Staining/ discolouration		
OTHER		

INTERPRETIVE/ ATTRIBUTION PLAQUE?	YES	NO
2 x plaques. Bronze plaque mounted into rock and standing steel plaque.		



TREATMENT PRIORITY

☒ LOW ☐ MEDIUM ☐ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	YES	**NO**

Recommended Remedial Treatment Works	Advised Cost

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate and avian guano. • Monitor possible stone delamination. • Monitor possible soil erosion.	Biennially 2 years 2 years

Title	*Flower*
Artist/ maker	Hart, Kevin Charles (Pro)
Year	1999
Asset No.	2000.23
Location	Address: Broken Hill Airport Lat. -31.998520, Long. 141.469753
Asset type	*Sculpture*
Dimensions	
Components	1
Materials	Steel, Paint
Manufacture	Cut, Welded

Previous repairs/ modifications? [X] YES [ ] NO

Notes: This artwork is one in a series of 10 sculptures designed by Pro Hart and constructed by Broken Hill TAFE.

Date of Examination: 8 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

[ ] 1. GOOD [☒] 2. FAIR [ ] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component		
Corrosion		
Cracks/ splitting		
Disjoin/ Loose component		
Distortion		
Pest damage		
Previous treatment/ repair		
Rotting		
Wear/ polishing		

OTHER	

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents	✓	Minor small abrasions evident throughout.
Accretion		
Areas of loss	✓	Loss and flaking paint observed throughout (figs. 5-9).
Corrosion	✓	Minor areas of surface corrosion where the paint layer is lost or perforated. Some blistering also noted (figs. 5, 7).
Cracks		
Delamination		
Dust/ dirt	✓	Dirt particulate and spider webs were observed throughout, consistent with display outdoors (fig. 9).
Fading	✓	Chalking and fading to the paint following exposure to sunlight and outdoor conditions (figs. 5-9).
Flaking/Friable	✓	Flaking and peeling paint (fig. 5-9).
Mould/ mould damage		
Pest damage		
Previous treatment	✓	The sculpture appears to have been repainted at least once (figs. 5-9) due to the slightly different hue between the two paint layers.
Staining/ discolouration		
OTHER		

INTERPRETIVE/ ATTRIBUTION PLAQUE?	**YES**	NO

TREATMENT PRIORITY

☐ LOW ☒ MEDIUM ☐ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	YES	NO

Recommended Remedial Treatment Works	Advised Cost
• Remove or reduce failing and flaking paint. • Stabilise surface corrosion where needed. • Repaint in a paint system rated for use on outdoor metals and colour-matched with the original.	~$2,500

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate and accumulation of biomatter from adjacent trees.	1 year

Title	*Library Mural*
Artist/ maker	Barrett, C.
Year	1982
Asset No.	
Location	Address: Charles Rasp Memorial Library Lat. -31.957718, Long. 141.464568
Asset type	*Mural*
Dimensions	
Components	1; 3 sections
Materials	Mortar (render), Paint
Manufacture	Painted

Previous repairs/ modifications? ☐ YES ☒ NO

Notes: Located on the exterior wall of the Charles Rasp Memorial Library, adjacent to the parking lot.

Date of Examination: 9 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

☐ 1. GOOD ☐ 2. FAIR ☒ 3. POOR ☐ 4. VERY POOR ☐ 5. EXTREME

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component	✓	Small areas of loss to the mortar substrate throughout (figs. 6, 11, 13-17).
Corrosion		
Cracks/ splitting	✓	Numerous cracks to the mortar substrate (figs. 4-9, 11-18, 20).
Disjoin/ Loose component		
Distortion	✓	Distortion and lifting to the mortar substrate around cracks (figs. 4-9, 11-18, 20).
Pest damage		
Previous treatment/ repair		
Rotting		
Wear/ polishing		
OTHER		

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents		
Accretion		
Areas of loss		
Corrosion		
Cracks		
Delamination		
Dust/ dirt	✓	Dirt particulate, bird excrement and spider webs were observed throughout, consistent with display outdoors.
Fading	✓	Fading and chalking to paint layers due to ultraviolet radiation and visible light exposure (figs. 4-20).
Flaking/Friable		
Mould/ mould damage		
Pest damage		
Previous treatment	✓	It's possible this mural has been re-painted over time.
Staining/ discolouration	✓	Staining adjacent to cracks in the mortar (figs. 4-9, 11-18, 20).
OTHER	Inked graffiti (figs. 20-22).	

INTERPRETIVE/ ATTRIBUTION PLAQUE?	YES	NO

TREATMENT PRIORITY

☐ LOW ☒ MEDIUM ☐ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	**YES**	NO

Recommended Remedial Treatment Works	Advised Cost
Currently the work is in a poor condition. Given the extent of damage juxtaposed with its value and significance to the community, Council may consider deaccessioning the work or commissioning a replacement mural. Contact the artist about making repairs in the first instance, if possible.	~$10,000-$15,000

Routine Maintenance	Frequency

Title	*Mining Shapes*
Artist/ maker	Hart, Kevin Charles (Pro)
Year	1999
Asset No.	2000.0027
Location	Address: Broken Hill Airport Lat. -31.998520, Long. 141.469753
Asset type	*Sculpture*
Dimensions	
Components	1
Materials	Steel, Paint
Manufacture	Cut, Welded

Previous repairs/ modifications? [X] YES [ ] NO

Notes: This artwork is one in a series of 10 sculptures designed by Pro Hart and constructed by Broken Hill TAFE.

Date of Examination: 8 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

[ ] 1. GOOD [X] 2. FAIR [ ] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component		
Corrosion		
Cracks/ splitting		
Disjoin/ Loose component		
Distortion		
Pest damage		
Previous treatment/ repair		
Rotting		
Wear/ polishing		

OTHER	

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents	✓	Minor small abrasions evident throughout.
Accretion		
Areas of loss		
Corrosion	✓	Corrosion visible where the paint layer is lost or perforated, blistering paint (figs. 6, 11-12).
Cracks		
Delamination		
Dust/ dirt	✓	Dirt particulate and spider webs were observed throughout recesses, consistent with display outdoors.
Fading	✓	Chalking and fading to the paint following exposure to sunlight and outdoor conditions (figs. 5-10).
Flaking/Friable	✓	Flaking and peeling paint (figs. 5-10).
Mould/ mould damage		
Pest damage		
Previous treatment	✓	The sculpture appears to have been repainted at least once due to the slightly different hue between the two paint layers.
Staining/ discolouration		
OTHER		

INTERPRETIVE/ ATTRIBUTION PLAQUE?	**YES**	NO

TREATMENT PRIORITY

☐ LOW ☒ MEDIUM ☐ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	YES	NO

Recommended Remedial Treatment Works	Advised Cost
• Remove or reduce failing and flaking paint. • Stabilise surface corrosion where needed. • Repaint in a paint system rated for use on outdoor metals and colour-matched with the original.	~$2,500

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate and accumulation of biomatter from adjacent trees.	1 year

Title	*Minor's kids, dragonfly and locusts*
Artist/ maker	Hart, Kevin Charles (Pro)
Year	1997
Asset No.	1997.0003
Location	Address: Broken Hill Airport Lat. -31. 99526, Long. 141. 47008
Asset type	*Mural*
Dimensions	
Components	3: section 1, section 2, section 3
Materials	SSN, Iron Mesh Armature
Manufacture	Assembled

Previous repairs/ modifications? [X] YES [ ] NO

Note: Wall painting created by Pro Hart for Broken Hill Airport as part of the *Arid Zones Artists* Mural in 1997.

Date of Examination: 7 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

[ ] 1. GOOD [ ] 2. FAIR [X] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component		
Corrosion		
Cracks/ splitting	✓	Numerous cracks were observed throughout all 3 figures. These range from hairline through to substantial (figs. 3-5, 9, 23, 25, 35, 37-38, 40-41).
Disjoin/ Loose component		
Distortion		
Pest damage		
Previous treatment/ repair	✓	Intervention noted: acrylic cover placed over wall painting.
Rotting		
Wear/ polishing		
OTHER		

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents	✓	Several surface abrasions were observed (figs. 7, 13, 16, 22, 24 and 29).
Accretion	✓	Several surface accretions are present (figs. 6, 13, 15-16, 19, 21-22, 26, 29-35, 39, 42-43.). Many of the white accretions appeared in an elongated splatter/drip line form indicating transfer occurred during previous painting of ceiling/interior walls.
Areas of loss	✓	Multiple areas of minor painted-surface loss were observed (figs. 5, 7, 10, 20, 22 and 29).
Corrosion		
Cracks		
Delamination		
Dust/ dirt	✓	Dirt particulate and spider web accumulation were observed throughout, consistent with permanent display.
Fading		
Flaking/Friable	✓	Lifting of paint layer noted around some edges of mural (fig. 36).
Mould/ mould damage		
Pest damage	✓	Pest activity evident throughout, particularly heavy accumulation of spider webs noted.
Previous treatment		
Staining/ discolouration		
OTHER		

INTERPRETIVE/ ATTRIBUTION PLAQUE?	YES	NO

TREATMENT PRIORITY

☐ LOW ☒ MEDIUM ☐ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	**YES**	NO

Recommended Remedial Treatment Works	Advised Cost
• Access required for surface clean to remove dirt particulates, accretions and spiderwebs. • Consolidate and fill cracks. • Consolidate and infill losses. • Stabilize all friable/lifting paint layers. Currently the works are in a stable condition, however the introduction of an acrylic/Perspex barrier has allowed a buildup of dirt/dust particulates as well as increased pest activity. A barrier that can be easily removed for routine surface cleaning should be considered as well as non-reflective alternative that doesn't disrupting viewing of the works.	~$8,000

Routine Maintenance	Frequency
• Surface clean to remove dirt particulates and accumulation of spider webs.	1 year

Title	*Ore Tracks*
Artist/ maker	Hart, Kevin Charles (Pro)
Year	1999
Asset No.	2000.0019
Location	Address: Broken Hill Airport Lat. -31.998520, Long. 141.469753
Asset type	*Sculpture*
Dimensions	
Components	1
Materials	Steel, Paint
Manufacture	Cut, Welded

Previous repairs/ modifications? [X] YES [ ] NO

Notes: This artwork is one in a series of 10 sculptures designed by Pro Hart and constructed by Broken Hill TAFE.

Date of Examination: 8 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

[ ] 1. GOOD [X] 2. FAIR [ ] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component		
Corrosion		
Cracks/ splitting		
Disjoin/ Loose component		
Distortion		
Pest damage		
Previous treatment/ repair		
Rotting		
Wear/ polishing		

OTHER	

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents	✓	Minor small abrasions evident throughout.
Accretion	✓	Small white accretion (sticker) (fig. 8). Floral decoration (fig. 2).
Areas of loss	✓	Flaking paint with loss observed throughout.
Corrosion	✓	Corrosion visible where the paint layer is lost or perforated and visible around base plinth (figs. 5-6).
Cracks		
Delamination		
Dust/ dirt	✓	Dirt particulate and spider webs were observed throughout recesses, consistent with display outdoors. Tree foliage also intruding on sculpture space, risking staining and warping to structure (figs. 11-16).
Fading	✓	Chalking and fading to the paint following exposure to sunlight and outdoor conditions (figs. 7-15).
Flaking/Friable	✓	Flaking and peeling paint (figs. 7-15).
Mould/ mould damage		
Pest damage		
Previous treatment	✓	The sculpture appears to have been repainted at least once due to the slightly different hue between the two paint layers.
Staining/ discolouration		
OTHER

Title	*Pro Hart Piano (Catching Yabbies On Tallywalka Creek)*
Artist/ maker	Wertheim (piano) Pro Hart (painted surface)
Year	2004
Asset No.	
Location	Address: Civic Centre (interior) Lat. -31.956966, Long. 141.464544
Asset type	*Functional Object*
Dimensions	
Components	1
Materials	Wood, Copper Alloy, Iron, Felt, Plastic, Horn/Bone, Lacquer
Manufacture	Assembled, Painted

Previous repairs/ modifications? [ ] YES [X] NO

Notes:

Date of Examination: 9 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

[ ] 1. GOOD [X] 2. FAIR [ ] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents	✓	Abrasion or sharp contact likely caused separation of wooden component and damage to wood corner (figs. 6-8).
Areas of loss/ detached or missing component	✓	Wooden element on proper right side separated (fig. 6); the missing element is located on top of the piano (fig. 8). Other areas of loss to the wood and lacquer observed throughout (figs. 7, 9, 13, 16).
Corrosion		
Cracks/ splitting		
Disjoin/ Loose component	✓	Felt/textile internal element is loose and partially separated (figs. 10, 14-17).
Distortion		
Pest damage		
Previous treatment/ repair		
Rotting		

Wear/ polishing		
OTHER		

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents	✓	Several surface abrasions resulting in loss to clear lacquer (figs. 9, 13, 16).
Accretion		
Areas of loss	✓	Loss to clear lacquer (figs. 9, 13, 16).
Corrosion		
Cracks		
Delamination		
Dust/ dirt	✓	Dirt particulate observed throughout.
Fading		
Flaking/Friable		
Mould/ mould damage		
Pest damage		
Previous treatment		
Staining/ discolouration		
OTHER		

INTERPRETIVE/ ATTRIBUTION PLAQUE?	**YES**	NO

TREATMENT PRIORITY

☐ LOW ☒ MEDIUM ☐ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	**YES**	NO

Recommended Remedial Treatment Works	Advised Cost
• Surface clean to remove dirt particulate. • Reintegrate separated wooden element. • Fill losses to the wooden elements and re-lacquer to match with the original. • Repair loss to lacquer (fig. 16). • If possible, find an alternative storage solution so the object is not at risk of falling chairs, etc. • Store with a cover.	~$5,000

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate. • Store with a cover.	1 years

Title	*Story Poles*
Artist/ maker	Geoff Demain, Darren Bates, Debra Bates, Frank Biasio, Tegan Biasio, Gary Edge, Betty Etrich, Sonia Etrich, Richard Martin, Alan McEvoy, Charmain McEvoy
Year	2003
Asset No.	2003.0029
Location	Address: Living Desert Flora and Fauna Sanctuary
Asset type	*Sculpture*
Dimensions	
Components	12
Materials	Wood, Iron, Paints, Stone, Glass
Manufacture	Carved, Lacquer

Previous repairs/ modifications? [ ] YES [X] NO

Notes: Acquisition funded through 2002 Year of the Outback, with assistance from Western Institute of TAFE and YAPA, 2003.
Please note that is artwork was a late inclusion into the outdoor sculpture survey. Information, including the exact title and accession number for each pole, has not been provided. All artists listed on the attribution plaque have been noted. Temporary conservation numbers (1-12) have been assigned to the poles for the purpose of identification in this report.

Date of Examination: 7 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia Bernard

CONDITION

[ ] 1. GOOD [ ] 2. FAIR [X] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

PRIMARY STRUCTURE	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component	✓	Extensive areas of loss to the paint substrates and surface coating are evident throughout, and likely stem from prolonged exposure to UV radiation and outdoor weather condition (figs.13-14, 16, 41-42, 44, 53, 57-58, 73-74). Small losses to the timber substrate are evident throughout, and again likely stem from prolonged exposure to UV radiation and outdoor weather conditions (figs 15, 21-22, 27-30, 25, 41, 57 and 73). Losses to the base of "Pole 4", likely stem from past pest activity and exposure to outdoor weather conditions (figs. 27-30). Multiple iron nails and small spherical glass pebbles are missing from the pole by artist Richard Martin (figs. 47-48, 61, 62-70).
Corrosion	✓	Iron components and fastenings exhibit extensive corrosion throughout (figs. 11-12, 23, 27-28, 30, 33, 35-36, 39, 43, 65, 84, 87-88).
Cracks/ splitting	✓	Cracks and splitting following the grain of the wood are evident throughout. These likely stem from movement in the material as it is exposed to different forces and degradation mechanisms (figs. 13-16, 27-30, 41, 57 and 73).
Disjoin/ Loose component	✓	Several iron nails have dislodged from the Richard Martin work. As the works were assessed at ground level, it is unclear if the glass pebbles at the top of the pole are unstable or loose (figs. 61, 62-70).
Distortion		
Pest damage	✓	Minor losses likely associated with past insect activity figs. 27-30, 88).

Previous treatment/ repair		
Rotting	✓	Moderate dry rot observed on at least one of the poles figs. 27-30).
Wear/ polishing		
OTHER		

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents		
Accretion	✓	Sap-like accretion resides were observed on multiple poles, may be attributed to excretions from the river red gum wood (figs. 19-20, 34, 49-50, 55, 62-63, 69-70 and 82).
Areas of loss	✓	Extensive surface paint losses noted throughout.
Corrosion	✓	The iron supports and fittings (nails, etc.) exhibits evidence of iron corrosion (figs. 11-12, 23, 27-28, 30, 33, 35-36, 39, 43, 65, 84, 87-88).
Cracks	✓	Numerous cracks are located throughout.
Delamination	✓	Moderate delamination of outer layers of wood were observed throughout, consistent with display outdoors.
Dust/ dirt	✓	Dirt particulate, bird excrement (figs. 89-90) and spider webs (figs. 89-90) were observed throughout, consistent with display outdoors.
Fading	✓	Extensive fading of painted surfaces was observed throughout, consistent with UV degradation and display outdoors.
Flaking/Friable		
Mould/ mould damage		
Pest damage	✓	Minor losses likely associated with past insect activity. Insect debris found on Pole 12 (Figure 88).
Previous treatment		
Staining/ discolouration	✓	Iron corrosion product staining is evident on the iron components and fastenings (figs. 11-12, 23, 27-28, 30, 33, 35-36, 39, 43, 65, 84, 87-88). UV degradation (darkening) to wood surface throughout (figs. 7, 8, 11-16, 21-22, 27-28, 35-36, 41-44, 49-50, 53-54, 57-58, 61-64, 69-70, 73-76, 81-84, 89-90).
OTHER	Carved inscriptions (artist names) present on each pole.

Remedial work required?	**YES**	NO

Recommended Remedial Treatment Works	Advised Cost
This work exhibits significant evidence of UV radiation-driven degradation to the varnish and wooden elements. Iron components have also corroded due to exposure to outdoor conditions. Remedial works should aim to: • Remove dirt particulate, cobwebs, and bird excrement from each pole. • Removed degraded wood surface layers through sanding or microbrasion. • Reintegrate loose iron nails and replace missing iron nails. • Reintegrate areas of paint loss on each pole. • Remove surface corrosion product from metal fastenings. • Application of varnish coating to each pole. It is recommended that artists are contacted, if possible, to discuss their interest in restoring the works.	~$25,000

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate and bird excrement. • Sand-back and reapply varnish. • Monitor for the presence of destructive biological agents (termites, etc.).	6 months 2-3 years 1 Year

Title	*Sturt Pea*
Artist/ maker	Hart, Kevin Charles (Pro)
Year	1999
Asset No.	2000.0025
Location	Address: Broken Hill Airport Lat. -31.998520, Long. 141.469753
Asset type	*Sculpture*
Dimensions	
Components	1
Materials	Steel, Paint
Manufacture	Cut, Welded

Previous repairs/ modifications? [X] YES [ ] NO

Notes: This artwork is one in a series of 10 sculptures designed by Pro Hart and constructed by Broken Hill TAFE.

Date of Examination: 8 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

[ ] 1. GOOD [X] 2. FAIR [ ] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component		
Corrosion		
Cracks/ splitting		
Disjoin/ Loose component		
Distortion		
Pest damage		
Previous treatment/ repair		
Rotting		
Wear/ polishing		

OTHER	2 x small holes noted on structure. Likely inherent by artist to allow draining of excess water build up. (figs. 9-10)

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents	✓	Minor small abrasions evident throughout.
Accretion		
Areas of loss	✓	Flaking paint with loss observed throughout.
Corrosion	✓	Corrosion visible where the paint layer is lost or perforated and visible around base plinth (figs. 5-8).
Cracks		
Delamination		
Dust/ dirt	✓	Dirt particulate and spider webs were observed throughout recesses, consistent with display outdoors. Tree foliage also intruding on sculpture space, risking staining and warping to structure (figs. 9-14).
Fading	✓	Chalking and fading to the paint following exposure to sunlight and outdoor conditions (figs. 5-12).
Flaking/Friable	✓	Flaking and peeling paint (figs. 5-12).
Mould/ mould damage		
Pest damage		
Previous treatment	✓	The sculpture appears to have been repainted at least once due to the slightly different hue between the two paint layers.
Staining/ discolouration		
OTHER		

INTERPRETIVE/ ATTRIBUTION PLAQUE?	**YES**	NO

TREATMENT PRIORITY

☐ LOW ☒ MEDIUM ☐ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	YES	NO

Recommended Remedial Treatment Works	Advised Cost
• Remove or reduce failing and flaking paint. • Stabilise surface corrosion where needed. • Repaint in a paint system rated for use on outdoor metals and colour-matched with the original.	~$2,500

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate and accumulation of biomatter from adjacent trees.	1 year

- 2003.0026: Squire, C. 2003, *Reconciliation*
- 2003.0027: Stewart, N. 2003, *Untitled*
- 2003.0028: Williams, D. 2003, *Emu and kangaroo tracks*

Date of Examination: 7 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia Bernard

CONDITION

[ ] 1. GOOD [ ] 2. FAIR [X] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component	✓	Extensive areas of loss to the paint and surface coating are evident throughout, and likely stem from prolonged exposure to UV radiation and outdoor weather condition (figs. 9, 18, 24, 35-37, 38, 40, 47, 49-51, 54, 74-81, 86-89, 91-92, 101-103, 120-122, 125-126, 133, 136, 138). Losses to the timber substrate are evident throughout, and again likely stem from prolonged exposure to UV radiation and outdoor weather conditions (figs. 34, 69). Multiple iron nails are missing from individual poles (figs. 35, 60-61, 64).

		Loss of one iron nail to pole #2003.0027.
Corrosion	✓	Iron nails and brackets fixing each pole to their timber plinth bases exhibit significant evidence of corrosion. Iron components on each pole, including nails, are also heavily corroded (figs. 10-13, 15, 17-18, 23, 25-26, 48, 60-66, 68, 77, 79, 100, 110, 131-132, 134. 137).
Cracks/ splitting	✓	Cracks and splitting following the grain of the wood are evident throughout. These likely stem from movement in the material as it is exposed to different forces and degradation mechanisms (figs. 11-12, 15, 18, 24, 29, 39, 87-89, 105, 114).
Disjoin/ Loose component	✓	Several iron nails have dislodged or come loose. Nails have been located on the ground below the work.
Distortion		
Pest damage		
Previous treatment/ repair		
Rotting		
Wear/ polishing		

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents		
Accretion	✓	Multiple accretions noted on the poles (figs. 123, 143-145).
Areas of loss	✓	Extensive surface paint losses noted throughout. UV degradation (darkening) to wood surface (figs. 9, 18, 24, 35-37, 38, 40, 47, 49-51, 54, 74-81, 86-89, 91-92, 101-103, 120-122, 125-126, 133, 136, 138).
Corrosion	✓	The iron supports and fittings (nails, etc.) exhibits evidence of iron corrosion (figs. 10-13, 15, 17-18, 23, 25-26, 48, 60-66, 68, 77, 79, 100, 110, 131-132, 134. 137).
Cracks	✓	Numerous cracks are located throughout.
Delamination	✓	Moderate delamination of outer layers of wood were observed throughout, consistent with display outdoors.
Dust/ dirt	✓	Dirt particulate, bird excrement (figs. 41, 67, 86) and spider webs (16, 34—37, 46, 99) were observed throughout, consistent with display outdoors.
Fading	✓	Extensive fading of painted surfaces was observed throughout, consistent with UV degradation and display outdoors (figs. 9, 18, 24, 35-37, 38, 40, 47, 49-51, 54, 74-81, 86-89, 91-92, 101-103, 120-122, 125-126, 133, 136, 138).
Flaking/Friable		
Mould/ mould damage		
Pest damage		
Previous treatment		
Staining/ discolouration	✓	Iron corrosion product staining is evident on the wooden substrate, adjacent to iron elements (figs. 10-13, 15, 17-18, 23, 25-26, 48, 60-66, 68, 77, 79, 100, 110, 131-132, 134. 137).
OTHER	Carved inscriptions (artist names) present on each pole. Carved letters noted on Pole #2003.0028, may likely represent graffiti/potential vandalism (figs. 146-147).	

INTERPRETIVE/ ATTRIBUTION PLAQUE?	YES	NO
No interpretive/attribution plaque noted.

Title	*The Ant*
Artist/ maker	Hart, Kevin Charles (Pro)
Year	1980
Asset No.	1990.0044
Location	Address: Lion's Park Lat. -31. 959321, Long. 141. 460157
Asset type	*Sculpture*
Dimensions	
Components	1
Materials	Steel, Wood, Paint
Manufacture	Cut, Welded, Assembled

Previous repairs/ modifications? [ ] YES [X] NO

Notes: Gift of the artist, 1990.

Date of Examination: 7 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

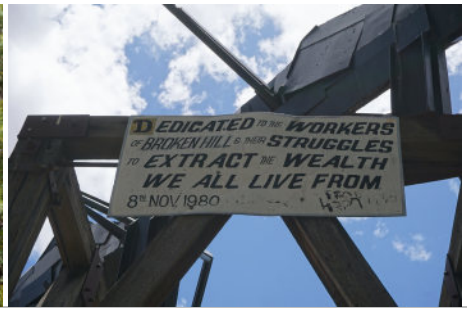
[ ] 1. GOOD [ ] 2. FAIR [X] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component		
Corrosion	✓	Corrosion to the steel elements evident throughout, but likely present at increased levels internally where water can pool (figs. 5-15). This could not be accessed in detail due to the structure's height.
Cracks/ splitting		
Disjoin/ Loose component		
Distortion	✓	Distortion/bending is evident on the sign attributed to the artist (fig. 16).
Pest damage		
Previous treatment/ repair		
Rotting	✓	Minor degradation/root to the wooden frame supporting the work.
Wear/ polishing		

OTHER	

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents	✓	Abrasions to the paint layer evident throughout.
Accretion		
Areas of loss	✓	Loss and flaking paint observed throughout (figs. 5-16).
Corrosion	✓	Surface corrosion where the paint layer is lost or perforated (figs. 5-15). Surface corrosion to the steel brackets holding the wooden frame together is intended (fig. 15).
Cracks		
Delamination		
Dust/ dirt	✓	Dirt particulate, bird excrement and spider webs were observed throughout, consistent with display outdoors. Biomatter has accumulated within the interior of the structure (figs. 9, 11-14).
Fading		
Flaking/Friable		
Mould/ mould damage		
Pest damage		
Previous treatment		
Staining/ discolouration		
OTHER		

INTERPRETIVE/ ATTRIBUTION PLAQUE?	**YES**	NO



TREATMENT PRIORITY

☐ LOW ☐ MEDIUM ☒ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	YES	NO

Recommended Remedial Treatment Works	Advised Cost
• Structural engineer to assess stability. • Remove or reduce failing and flaking paint. • Stabilise surface corrosion where needed. • Fill areas of corrosion loss where needed. • Repaint in a paint system rated for use on outdoor metals and colour-matched with the original.	~$15,000

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate and accumulation of biomatter from adjacent trees. • Touch up paint as needed. • Keep biomatter and biogrowth in the vicinity curated.	1 year

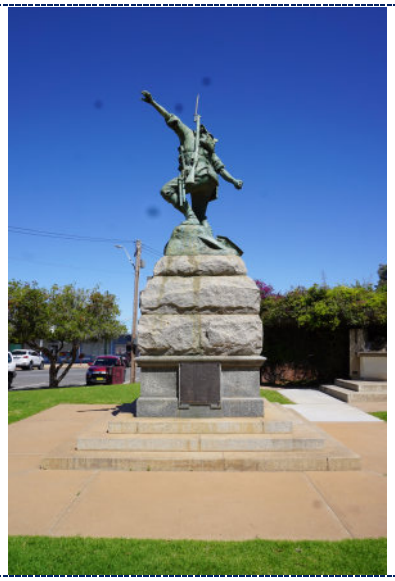
Title	*The Bomber*
Artist/ maker	Gilbert, Charles Web
Year	1924
Asset No.	1925.0001
Location	Address: Broken Hill Courthouse Lat. -31.959085, Long. 141.463867
Asset type	*Memorial*
Dimensions	
Components	1
Materials	Bronze, Granite, Gilded lettering
Manufacture	Cast, Carved, Assembled



Previous repairs/ modifications? [ ] YES [X] NO

Notes:

Date of Examination: 7 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

[ ] 1. GOOD [X] 2. FAIR [ ] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component	✓	Loss to mortar pointing evident throughout the granite steps/plinth (figs. 13-15, 19-20).
Corrosion		
Cracks/ splitting		
Disjoin/ Loose component		
Distortion		
Pest damage		
Previous treatment/ repair		
Rotting		
Wear/ polishing	✓	Surface patina on the copper alloy plaques fixed to each appears diminished in areas, possibly as a result of polishing or over-cleaning (figs. 9-10).

OTHER	

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents		
Accretion		
Areas of loss		
Corrosion	✓	Surface corrosion is evident throughout the bronze figure (figs. 5-8) and the copper alloy plaques listing individual names (figs. 9-10, 16). Corrosion to the bronze appears consistent with atmospheric pollution-driven mechanisms. Iron elements fixing the copper-alloy plaques on each side of the work also exhibit evidence of corrosion (fig. 11).
Cracks		
Delamination		
Dust/ dirt	✓	Dirt particulate (figs. 11-15), surface accretions (figs. 9,11), bird excrement (figs. 19-20) and spider webs (figs. 17-18) were observed throughout, consistent with display outdoors.
Fading		
Flaking/Friable		
Mould/ mould damage		
Pest damage		
Previous treatment		
Staining/ discolouration	✓	Copper and iron corrosion product staining to the granite elements is present throughout (figs. 5, 11-15).
OTHER	Small plants were observed growing within voids left by mortar pointing loss (figs. 21-22).	

INTERPRETIVE/ ATTRIBUTION PLAQUE?	**YES**	NO

TREATMENT PRIORITY

☐ LOW ☒ MEDIUM ☐ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	**YES**	NO

Recommended Remedial Treatment Works	Advised Cost
• Surface clean to remove dirt particulate and loose corrosion product. • Reduce atmospheric corrosion product. • Remove staining to stone. • Repoint missing mortar. • Wax bronze and copper alloy components.	~$20,000

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate and bird excrement. • Re-apply wax.	2 years

Title	*The Bride (Australia)*
Artist/ maker	Mira, Dr. Mahomad
Year	1993
Asset No.	1994.0024
Location	Address: Living Desert State Park Lat. -31.899288 Long. 141.449975
Asset type	*Sculpture*
Dimensions	
Components	
Materials	Sandstone (Wilcannia region), concrete/cement
Manufacture	Carved sandstone mounted with cement/concrete

Previous repairs/ modifications? [ ] YES [X] NO

Notes: One of twelve sandstone sculptures carved during the 1993 Sculpture Symposium organised by sculptor Lawrence Beck Gundabuka with financial support from Broken Hill City Council and an Australia Council grants program.

Date of Examination: 7 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

[ ] 1. GOOD [X] 2. FAIR [ ] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

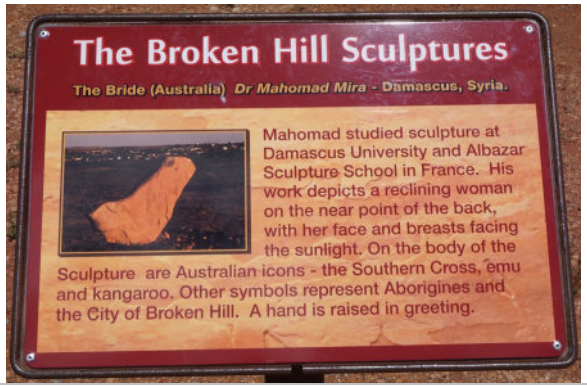
PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component		
Corrosion		
Cracks/ splitting	✓	Long crack visible through rear proper right side extending around to front (figs. 7-11). This may stem from a natural fault in the sandstone.
Disjoin/ Loose component	✓	Cement/concrete joining sculpture to rock escarpment appears loose with some cracks (figs. 5-6).
Distortion		
Pest damage		
Previous treatment/ repair		
Rotting		
Wear/ polishing		

OTHER	

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents		
Accretion		
Areas of loss		
Corrosion		
Cracks		
Delamination	✓	Minor stone delamination present.
Dust/ dirt	✓	Minor dirt particulate observed throughout, inherent to outdoor sculpture.
Fading		
Flaking/Friable		
Mould/ mould damage		
Pest damage		
Pitting		
Previous treatment		
Staining/ discolouration		
OTHER		

INTERPRETIVE/ ATTRIBUTION PLAQUE?	**YES**	NO

2 x plaques. Bronze plaque mounted into ground cement and standing acrylic plaque.



TREATMENT PRIORITY

☒ LOW ☐ MEDIUM ☐ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	YES	**NO**

Recommended Remedial Treatment Works	Advised Cost

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate and avian guano. • Monitor large cracks in the stone and overall structural stability. • Monitor possible stone delamination. • Monitor possible soil erosion.	Biennially 1 year 2 years 2 years

PUBLIC WORKS CONDITION REPORT

Title	*The Butterfly*
Artist/ maker	Tirado, Antonio Nava and Vodic, Len
Year	1995
Asset No.	1997.0004
Location	Address: Broken Hill Airport Lat. -31.99882, Long. 141.47027
Asset type	*Sculpture*
Dimensions	
Components	2
Materials	Sandstone, High Density Plastic, Timber
Manufacture	Carved, Mounted

Previous repairs/ modifications? [ ] YES [X] NO

Notes: Gift of the artist.

Date of Examination: 8 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

[X] 1. GOOD [ ] 2. FAIR [ ] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component		
Corrosion		
Cracks/ splitting		
Disjoin/ Loose component		
Distortion		
Pest damage		
Previous treatment/ repair		
Rotting		
Wear/ polishing		
OTHER		

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents	✓	Minor abrasions evident throughout (figs. 4, 11-12).
Accretion	✓	3 x yellow deposits visible on verso (fig. 11) and brown figure '8' accretion/inscription noted (fig. 10).
Areas of loss		
Corrosion		
Cracks		
Delamination	✓	Possible small areas of stone delamination noted (figs. 9-14).
Dust/ dirt	✓	Dirt particulates and spider webs were observed on top surfaces and within sculpture recesses (figs. 5-7).
Fading		
Flaking/Friable		
Mould/ mould damage		
Pest damage		
Previous treatment		
Staining/ discolouration	✓	Tidelines noted on timber plinth blocks, indicating prior exposure to moisture.
OTHER		

INTERPRETIVE/ ATTRIBUTION PLAQUE?	YES	**NO**

TREATMENT PRIORITY

☒ LOW ☐ MEDIUM ☐ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	YES	**NO**

Recommended Remedial Treatment Works	Advised Cost

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate and accumulation of arachnid webbing.	1 year

Title	*The Jamison's Shaft*
Artist/ maker	Lyle, Max
Year	1979
Asset No.	1979.0008
Location	Address: Administration Centre Plaza Lat. -31.958330, Long. 141.462608
Asset type	*Sculpture*
Dimensions	
Components	1
Materials	Stainless Steel
Manufacture	Assembled

Previous repairs/ modifications? [ ] YES [X] NO

Notes: Commissioned with assistance from the Visual Board, 1979.

Date of Examination: 7 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

[ ] 1. GOOD [X] 2. FAIR [ ] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component		
Corrosion		
Cracks/ splitting		
Disjoin/ Loose component		
Distortion		
Pest damage		
Previous treatment/ repair		
Rotting		
Wear/ polishing		

OTHER	

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents	✓	Linear scratches were observed running vertically down the length of each leg (figs. 5-8).
Accretion		
Areas of loss		
Corrosion	✓	Surface corrosion is evident in the vertical scratches running the length of each of the four supportive legs (figs. 5-8). These are uniform throughout and appear to stem from tooling marks left during manufacture. The scratches have disturbed the stable oxide layer on the surface, permitting the formation of corrosion. Minor surface oxidation/tea staining surrounding the drain hole at the apex of the diamond point (fig. 10).
Cracks		
Delamination		
Dust/ dirt	✓	Dirt particulate (figs. 9-12) and spider webs were observed throughout, consistent with display outdoors. Biomatter has collected at the base of the work (fig. 13).
Fading		
Flaking/Friable		
Mould/ mould damage		
Pest damage		
Previous treatment		
Staining/ discolouration		
OTHER

Title	*The Last Drop*
Artist/ maker	TAFE Western
Year	
Asset No.	
Location	Address: 248/240 Argent St Lat. -31.958792, Long. 141.464397
Asset type	*Sculpture*
Dimensions	
Components	1
Materials	Steel, Stainless Steel, Copper alloy (lock), Paint
Manufacture	Laser cut, Welded, Painted

Previous repairs/ modifications? [ ] YES [X] NO

Notes:

Date of Examination: 7 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

[ ] 1. GOOD [ ] 2. FAIR [X] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component		
Corrosion	✓	Extensive corrosion of ferric components occurring at multiple locations. Particularly severe and widespread on cross bar base of 'cage' portion (figs 5-6); and on surface of 'drop' where paint losses expose steel substrate, particularly severe on bottom of this component where water runoff collects, which has led to a small structural loss (fig 12). Also severe at welds on unpainted steel plates on surface of 'drop' (figs 9-10).
Cracks/ splitting		
Disjoin/ Loose component		
Distortion		
Pest damage		
Previous treatment/ repair	✓	Unclear if unpainted steel plates welded to surface of the 'drop' are original or repair patches (figs 9-10).

Rotting		
Wear/ polishing		
OTHER		

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents	✓	Several areas of the painted surface on the 'drop' are abraded/ scratched (fig 11), exposing the steel substrate. Corrosion of the substrate is occurring due to the losses in the paint layer.
Accretion		
Areas of loss		Multiple areas of loss of the painted surfaces. The paint layer on the base pole (and possibly the cross-bar mid-section base, if this was originally painted) is significantly worn, exposing the steel substrate and allowing extensive corrosion to occur (fig. 7).
Corrosion	✓	Surface corrosion is evident across the work, as described for notes on structural condition, above.
Cracks		
Delamination	✓	Delamination due to corrosion of substrate in areas where the paint layer has been abraded or chipped.
Dust/ dirt	✓	Moderate level of dirt buildup, but consistent with outdoor conditions.
Fading		
Flaking/Friable		
Mould/ mould damage		
Pest damage		
Previous treatment		
Staining/ discolouration		
OTHER	Partial blanching of the paint on the upper portion of the 'drop' that receives direct sun exposure (fig 8); blanching of the black paint on the 'cage' component (figs 5-6).	

INTERPRETIVE/ ATTRIBUTION PLAQUE?	**YES**	NO

Title of work is cut into steel panel at top of work; additional panel at base of mid-section reading 'TAFE WESTERN'

TREATMENT PRIORITY

☐ LOW ☐ MEDIUM ☒ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	**YES**	NO

Recommended Remedial Treatment Works	Advised Cost
• Strip back failing paint reinstate the protective and aesthetic functions of the paint layer. • Abrasive surface clean to remove all loose corrosion product. • Treat corrosion and fill losses where necessary. • Repaint with an appropriate system rated for outdoor exposure and colour matched to the original. Contact TAFE Western about making repairs in the first instance as the work originated in their facility.	~$10,000

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate and bird excrement. • Touch up areas of paint loss as needed.	2-3 years

IMAGES

Figure 1: Front

Figure 2: Back

Figure 3: Proper left

Figure 4: Proper right

Figure 5: Detail – extensive corrosion of steel in cross-bar mid section base.

Figure 6: Detail – corrosion occurring at mid-section base piece where paint layer has chipped. Corrosion of the substrate is causing further lifting of the paint in this area.

Figure 7: Detail – support pole. Extensive loss of paint layer exposing steel substrate. Surface corrosion occurring.

Figure 8: Detail – blanching of blue paint layer, appearing as white hazy bloom on upper section of 'drop' component. Minor losses and areas of corrosion also visible.

Figure 9: Detail – steel plate on surface of 'drop' (unclear if original or not). Extensive corrosion of welds surrounding the plate

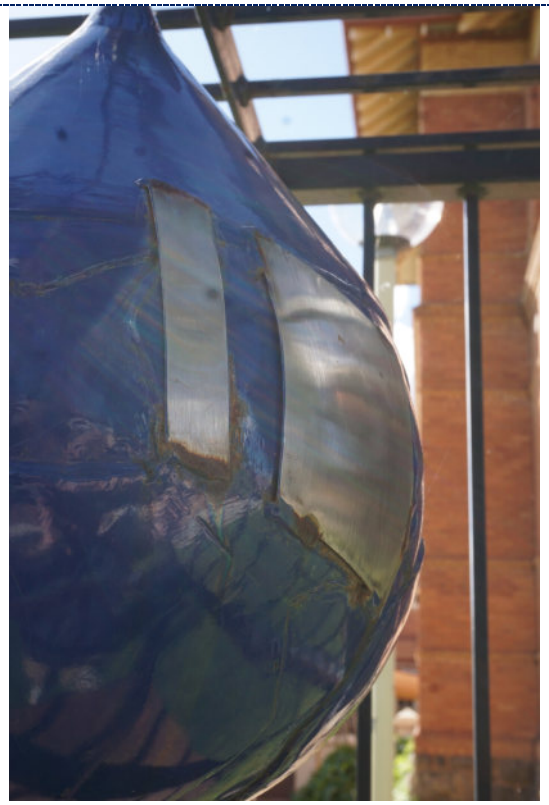

Figure 10: Detail (additional view). Steel plate on surface of 'drop' (unclear if original or not). Extensive corrosion of welds surrounding the plate

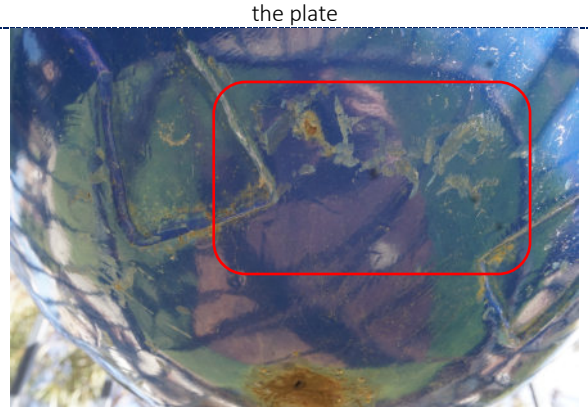

Figure 11: Detail – abrasions of paint on bottom of 'drop' component. Some corrosion occurring where steel substrate has been exposed.

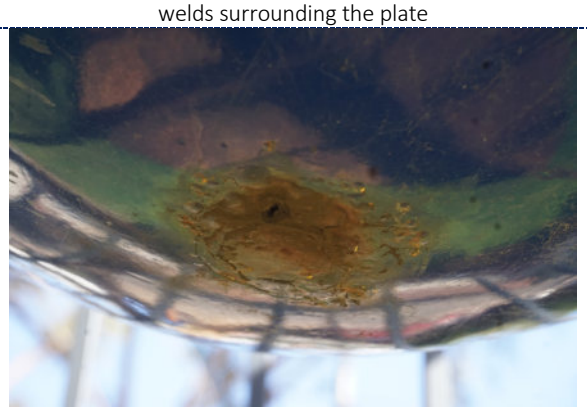

Figure 12: Detail – extensive ferric corrosion, including loss (small hole) of steel at base of 'drop', likely caused partially by water runoff collecting at this point.

Title	*The Workers*
Artist/ maker	Hart, Kevin Charles (Pro)
Year	1995
Asset No.	1995.0105
Location	Address: Lion's Park Lat. -31. 959557, Long. 141. 460492
Asset type	*Sculpture*
Dimensions	
Components	1
Materials	Steel, Paint
Manufacture	Cut, Welded, Painted

Previous repairs/ modifications? [X] YES [ ] NO

Notes: Donated by Broken Hill Lions.

Date of Examination: 7 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

[ ] 1. GOOD [☒] 2. FAIR [ ] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component		
Corrosion	✓	Corrosion to the steel elements, particularly at the base where water pools (figs. 9-10, 13-16, 19-23).
Cracks/ splitting		
Disjoin/ Loose component		
Distortion	✓	The object appears to have been impacted at height, possibly by a large vehicle driving past (figs. 5-6).
Pest damage		
Previous treatment/ repair		
Rotting		
Wear/ polishing		

OTHER	

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents		
Accretion	✓	White surface accretions evident adjacent to iron corrosion product at base (figs. 9-10, 14, 16, 19-20). This may stem from previous applications of a phosphoric-acid-based corrosion converter.
Areas of loss	✓	Loss and flaking paint observed throughout, particularly at the base.
Corrosion	✓	Surface corrosion where the paint layer is lost or perforated (figs. 9-10, 13-16, 19-23).
Cracks		
Delamination		
Dust/ dirt	✓	Dirt particulate, bird excrement and spider webs were observed throughout, consistent with display outdoors. Biomatter has accumulated in areas at the base (figs. 19-20).
Fading	✓	UV-degraded paint following outdoor exposure (7-23).
Flaking/Friable		
Mould/ mould damage		
Pest damage		
Previous treatment	✓	The artwork appears to have been previously painted.
Staining/ discolouration		
OTHER	Incised graffiti in paint layer (fig. 8).	

INTERPRETIVE/ ATTRIBUTION PLAQUE?	**YES**	NO

TREATMENT PRIORITY

☐ LOW ☐ MEDIUM ☒ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	YES	NO

Recommended Remedial Treatment Works	Advised Cost
• Structural engineer to assess stability. • Remove or reduce failing and flaking paint. • Stabilise surface corrosion where needed. • Fill areas of corrosion loss where needed. • Repaint in a paint system rated for use on outdoor metals and colour-matched with the original.	~$20,000

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate and accumulation of biomatter from adjacent trees. • Touch up paint as needed. • Keep biomatter cleaned from object base.	1 year

Title	*Titanic Memorial*
Artist/ maker	Hack, E. Bart
Year	1913
Asset No.	1913.0003
Location	Address: Sturt Park Lat. -31.956149, Long. 141.462178
Asset type	*Memorial*
Dimensions	
Components	1
Materials	Marble, Lead, Iron, Concrete, Concrete Render, Paint
Manufacture	Carved, Assembled, Cast (iron)

Previous repairs/ modifications? [X] YES [ ] NO

Notes:
Erected by the citizens of Broken Hill as a memorial to the heroic bandsmen of the steamship Titanic.

Date of Examination: 7 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

[ ] 1. GOOD [☒] 2. FAIR [ ] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component	✓	Losses evident to the marble (figs. 12, 22-23), marble pointing (figs. 9,13), rendered/plinth (figs. 10-11, 16-21, 24-27), and cast iron (figs. 24-25) substrates were evident throughout.
Corrosion		
Cracks/ splitting	✓	Cracks of varying sizes were observed on both the marble (figs. 12-14, 22-23) and rendered (figs. 10-11, 16-20, 24-28) substrates.
Disjoin/ Loose component		
Distortion		
Pest damage		
Previous treatment/ repair	✓	The concrete plinth and iron railing appear to have been fill and repainted several times.
Rotting		
Wear/ polishing		

OTHER	

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents	✓	An abrasion with paint transfer was evident on the marble substrate (fig. 15).
Accretion	✓	Small surface accretions were observed throughout.
Areas of loss	✓	Losses to green paint on railing (figs. 24-28).
Corrosion	✓	Corrosion is present on the cast iron railing where the paint has failed (figs. 24-28).
Cracks		
Delamination		
Dust/ dirt	✓	Dirt particulate, bird excrement and spider webs were observed throughout, consistent with display outdoors.
Fading	✓	Fading to green paint on railing (figs. 24-28).
Flaking/Friable		
Mould/ mould damage		
Pest damage		
Previous treatment		
Staining/ discolouration		
OTHER		

INTERPRETIVE/ ATTRIBUTION PLAQUE?	**YES**	NO

TREATMENT PRIORITY

☐ LOW ☒ MEDIUM ☐ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	YES	NO

Recommended Remedial Treatment Works	Advised Cost
• Surface clean to remove dirt particulate and loose corrosion product. Ideally steam – do not use a pressure washer on the marble substrate. • Consolidate and fill, where possible, cracks in the marble substrate. • Repoint between the marble elements. • Remove failing green paint. • Treat iron elements with a corrosion inhibitor. • Repaint in a paint system rated for use on outdoor metals and colour-matched with the original. • Make repairs to concrete plinth and render.	~$20,000

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate and bird excrement. • Touch up paint as needed.	1 year

Title	*Tiwi Totems*
Artist/ maker	Pupangamirri, Gordon
Year	1993
Asset No.	1994.0014
Location	Address: Living Desert State Park Lat. -31.899288 Long. 141.449975
Asset type	*Sculpture*
Dimensions	
Components	
Materials	Sandstone (Wilcannia region), concrete/cement
Manufacture	Carved sandstone mounted with cement/concrete

Previous repairs/ modifications? [ ] YES [X] NO

Notes: One of twelve sandstone sculptures carved during the 1993 Sculpture Symposium organised by sculptor Lawrence Beck Gundabuka with financial support from Broken Hill City Council and an Australia Council grants program.

Date of Examination: 7 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

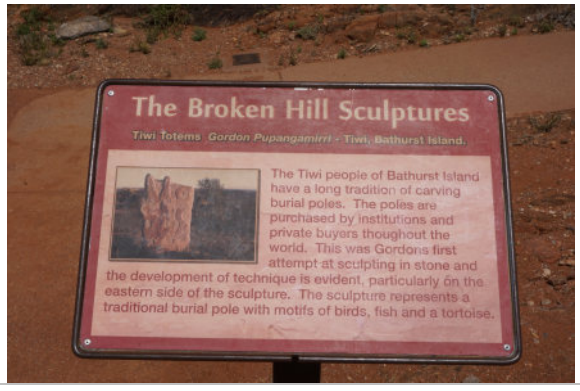
[ ] 1. GOOD [X] 2. FAIR [ ] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component	✓	Hole present at base, likely stemming from quarrying processes when the stone was sourced (fig. 5).
Corrosion		
Cracks/ splitting		
Disjoin/ Loose component		
Distortion		
Pest damage		
Previous treatment/ repair		
Rotting		
Wear/ polishing		
OTHER		

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents	✓	Minor abrasions and pitting visible throughout, likely the cause of natural weathering (fig. 5).
Accretion		
Areas of loss		
Corrosion		
Cracks		
Delamination	✓	Possible surface delamination (figs. 6-7, 9-10).
Dust/ dirt	✓	Minor dust and dirt visible, inherent to outdoor sculpture
Fading		
Flaking/Friable		
Mould/ mould damage		
Pest damage	✓	Spider webs visible on top proper left edges (fig. 8).
Previous treatment		
Staining/ discolouration		
OTHER		

INTERPRETIVE/ ATTRIBUTION PLAQUE?	**YES**	NO

2 x plaques. Bronze plaque mounted into rock and standing acrylic plaque.



TREATMENT PRIORITY

☒ LOW ☐ MEDIUM ☐ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	YES	**NO**

Recommended Remedial Treatment Works	Advised Cost

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate and avian guano. • Monitor stone delamination. • Monitor possible soil erosion.	Biennially 1 year 2 years

Title	*Trucks*
Artist/ maker	Hart, Kevin Charles (Pro)
Year	1999
Asset No.	2000.0028
Location	Address: Broken Hill Airport Lat. -31.998520, Long. 141.469753
Asset type	*Sculpture*
Dimensions	
Components	1
Materials	Steel, Paint
Manufacture	Cut, Welded

Previous repairs/ modifications? [X] YES [ ] NO

Notes: This artwork is one in a series of 10 sculptures designed by Pro Hart and constructed by Broken Hill TAFE.

Date of Examination: 8 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

[ ] 1. GOOD [X] 2. FAIR [ ] 3. POOR [ ] 4. VERY POOR [ ] 5. EXTREME

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component		
Corrosion		
Cracks/ splitting		
Disjoin/ Loose component		
Distortion		
Pest damage		
Previous treatment/ repair		
Rotting		
Wear/ polishing		

OTHER	

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents	✓	Minor small abrasions evident throughout.
Accretion		
Areas of loss	✓	Flaking paint with loss observed throughout.
Corrosion	✓	Corrosion to iron element at base covered by biomatter. Biomatter holds water against the surface, resulting in increased corrosion (fig. 6).
Cracks		
Delamination		
Dust/ dirt	✓	Dirt particulate and spider webs were observed throughout recesses, consistent with display outdoors.
Fading	✓	Chalking and fading to the paint following exposure to sunlight and outdoor conditions (figs. 7-12).
Flaking/Friable	✓	Flaking and peeling paint (figs. 7-12).
Mould/ mould damage		
Pest damage		
Previous treatment	✓	The sculpture appears to have been repainted at least once due to the slightly different hue between the two paint layers.
Staining/ discolouration		
OTHER		

INTERPRETIVE/ ATTRIBUTION PLAQUE?	**YES**	NO

TREATMENT PRIORITY

☐ LOW ☒ MEDIUM ☐ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	YES	NO

Recommended Remedial Treatment Works	Advised Cost
• Remove or reduce failing and flaking paint. • Stabilise surface corrosion where needed. • Repaint in a paint system rated for use on outdoor metals and colour-matched with the original.	~$2,500

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate and accumulation of biomatter from adjacent trees.	1 year

Areas of loss		
Corrosion	✓	Surface corrosion is evident to visible elements of the iron armature (figs. 5-6).
Cracks		
Delamination		
Dust/ dirt	✓	Dirt particulate and spider webs were observed throughout, consistent with display outdoors. Biomatter has collected at the base of the work (fig. 20).
Fading		
Flaking/Friable	✓	The cement fondue is friable in areas surrounding impact losses.
Mould/ mould damage		
Pest damage		
Previous treatment		
Staining/ discolouration		
OTHER		

INTERPRETIVE/ ATTRIBUTION PLAQUE?	YES	NO

TREATMENT PRIORITY

☐ LOW ☐ MEDIUM ☒ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	YES	NO

Recommended Remedial Treatment Works	Advised Cost
• Surface clean to remove dirt particulate, accretions and graffiti. • Remove biomatter collecting at the base. • Consolidate and fill fondue cracks. • Treat iron corrosion product where visible. • Reintegrate damaged and missing fondue. Contact the artist about making repairs in the first instance, if possible. Currently the works are in a very poor condition. Given the extent of damage juxtaposed with its value and significance to the community, Council may consider deaccessioning the work.	~$10,000-$15,000

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate and accumulation of biomatter from adjacent trees.	1 year

Title	*Canoe*
Artist/ maker	De Main, Geoff
Year	
Asset No.	
Location	Address: Broken Hill Courthouse Lat. -31.958806, Long. 141.464296
Asset type	*Sculpture*
Dimensions	
Components	1
Materials	Wood, Plastic Lining, Iron, Paint
Manufacture	Carved, Lacquer

Previous repairs/ modifications? [ ] YES [X] NO

Notes:

Date of Examination: 7 Nov 2022 **Examiner:** Evan Tindal, Ellie Urrutia

CONDITION

[ ] 1. GOOD [ ] 2. FAIR [ ] 3. POOR [X] 4. VERY POOR [ ] 5. EXTREME

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component	✓	Extensive areas of loss to the paint and varnish substrates are evident throughout, and likely stem from prolonged exposure to UV radiation and outdoor weather condition (figs. 7-23, 25-26). Varnish layers on the bottom of the canoe and in more protected areas are in a better condition than those exposed to direct sunlight. A black polypropylene liner fixed to the interior as a water barrier is significantly degraded (figs. 11-16). One copper alloy screw is missing from the interpretive plaque (fig. 26).
Corrosion	✓	Iron pins fixing the two figure heads to the main structure at each end exhibit significant evidence of corrosion (figs. 19-20). Iron staples used to fix the polypropylene liner are also heavily corroded (figs. 11-13, 15-16).
Cracks/ splitting	✓	Cracks and splitting following the grain of the wood are evident throughout. These likely stem from movement in the material as it is exposed to different forces and degradation mechanisms.
Disjoin/ Loose component	✓	Several small wood fragments from the interior of the canoe were observed within.
Distortion		

Pest damage		
Previous treatment/ repair		
Rotting	✓	The interior of the canoe exhibited evidence of rotting, particularly where water can collect and sustain biological agents.
Wear/ polishing		
OTHER		

SURFACE/ COATING	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Accretion	✓	Tar-like accretion resides were observed throughout and may stem from previous attempts at waterproofing (figs. 16,20).
Areas of loss		
Corrosion	✓	The iron mount structure also exhibits evidence of corrosion (figs. 22-24).
Cracks	✓	Small surface cracks are located throughout.
Delamination		
Dust/ dirt	✓	Dirt particulate, bird excrement (fig. 26) and spider webs (fig. 15) were observed throughout, consistent with display outdoors.
Fading		
Flaking/Friable		
Mould/ mould damage		
Pest damage		
Previous treatment		
Staining/ discolouration	✓	Iron corrosion product staining is evident on the wooden substrate, adjacent to iron elements (figs. 16,19).
OTHER	Inked graffiti was observed on the female figure's face and torso (figs. 5-6).	

INTERPRETIVE/ ATTRIBUTION PLAQUE?	**YES**	NO

TREATMENT PRIORITY

☐ LOW ☐ MEDIUM ☒ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	YES	NO

Recommended Remedial Treatment Works	Advised Cost
This work exhibits significant evidence of UV radiation-driven degradation to the varnish and wooden elements. Iron components have also corroded due to exposure to outdoor conditions. Remedial works should aim to: • Remove the degraded varnish layer. • Remove the degraded wood surface layer through sanding or microbrasion. • Replace corroded iron bolts with stainless and re-seal. • Refinish the interior to improve waterproofing, with the possible inclusion of several drain holes to facilitate this. These should be large enough (>20cm) that they are not easily clogged. • Remove surface corrosion product from the steel mount and re-paint. It is recommended that artist is contacted, if possible, to discuss their interest in restoring the work.	~$15,000

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate and bird excrement. • Sand-back and reapply varnish. • Monitor for the presence of destructive biological agents (termites, etc.).	6 months 2-3 years 1 Year

PRIMARY STRUCTURE	**MATERIALS:**	
CONDITION	✓	NOTES
Abrasions/ dents		
Areas of loss/ detached or missing component		
Corrosion		
Cracks/ splitting		
Disjoin/ Loose component		
Distortion		
Pest damage		
Previous treatment/ repair		
Rotting		
Wear/ polishing		
OTHER		

SURFACE/ COATING	MATERIALS:	
CONDITION	✓	NOTES
Abrasions/ dents		
Accretion	✓	Surface accretions, likely white paint splatter, observed throughout (figs. 6-10).
Areas of loss		
Corrosion		
Cracks		
Delamination		
Dust/ dirt	✓	Light dirt particulate observed throughout.
Fading		
Flaking/Friable		
Mould/ mould damage		
Pest damage		
Previous treatment		
Staining/ discolouration		
OTHER		

INTERPRETIVE/ ATTRIBUTION PLAQUE?	YES	**NO**

TREATMENT PRIORITY

☒ LOW ☐ MEDIUM ☐ HIGH ☐ EXTREME/URGENT

CONSERVATION RECOMMENDATIONS

Remedial work required?	**YES**	NO

Recommended Remedial Treatment Works	Advised Cost
• Surface clean to remove dirt particulate. • Remove surface accretions.	~$1,000

Routine Maintenance	Frequency
• Surface clean to remove dirt particulate.	1 years
